Circulation of Knowledge

for research, society & the economy

EKT plays a central role at national level in the collection, documentation, preservation and circulation of Greek scientific and cultural content, through state of the art e-Infrastructure and having established an extensive network of strategic partnerships.

Our goals are to strengthen access to knowledge for everyone, to measure the national research, development and innovation activities, to facilitate the creative re-use of Greek cultural content for educational and societal purposes, and to enhance the research and innovation capacity through the re-use of the scientific output.

e-Infrastructure

infrastructure & services

e-Infrastructures

- National Archive of PhD Theses
- Greek Reference Index for the Social Sciences and Humanities
- Registries (researchers, doctorate holders, RDI organisations)
- RDI Statistics and Indicators
- Unified catalogue of scientific and cultural content
- Bibliographic references catalogue (Argo)
- Datacentre & Digitisation

e-Services

- Digital Repositories
- openABEKT (proprietary Integrated Library System)
- ePublishing services for journals, books & conference proceedings
- Online submission of PhD theses
- Digital preservation
- Digital content quality and interoperability certification
- Current Research Information Systems (CRIS)

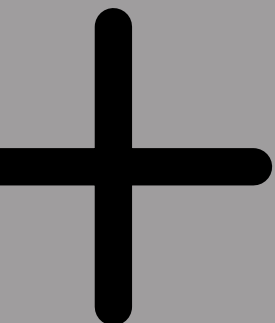

Metrics:

indicators for Research,
Development & Innovation

metrics.ekt.gr

Policy planning for Research, Development & Innovation is supported by the use of data, statistics and publications.

Metrics:

indicators for Research, Development & Innovation

- collecting data for Research & Development in Greece including expenditure, personnel, activities, scientific publications and regional development
- measuring the Innovation of Greek enterprises and their global performance
- publishing data on research activities of Greek organizations & researchers in European projects
- producing the official statistics for Research, Development & Innovation in Greece, contributing to the Eurostat/OECD statistics
- providing high quality data, analytic tools and publications fostering evidence-based policies for Innovation.

eContent: digital content & services

- aggregating, collecting and documenting content
- collaborating with publishers of scientific journals during all stages of the publishing process, encouraging Open Access to their content and facilitating scholarly communication
- curating and providing access to the National Union Catalogue of Scientific Journals
- developing large-scale aggregators of authoritative Greek scientific and cultural content
- offering high-level services to knowledge producers using SaaS & Cloud technologies
- partnering with research institutions and cultural providers aiming at aggregating, preserving and disseminating their digital content.

Innovation:

research, innovation
& entrepreneurship

- providing dissemination, brokerage and technology transfer services for fostering the exploitation and re-use of knowledge
- linking research with the entrepreneurship and the creative industries
- supporting small and medium-sized enterprises via the Enterprise Europe Network-Hellas, the Greek node of the biggest network for the exploitation of research results and business opportunities in the EU
- providing advisory and support services for competitive research programmes, e.g. National Contact Point for Horizon 2020.

“*Strengthening
the knowledge economy by
exploiting research results*”

networking, events,
funding tools, **brokerage
services**, exploitation of
research results,
technology transfer,
information & advisory services

EKT is

the main Greek scientific content provider

We aggregate, collect, document, preserve and disseminate authoritative digital content & data, produced and used by the Greek and international scientific, research and cultural communities.

We are an integral part of the National Hellenic Research Foundation. We leverage the mobilization towards a knowledge-driven economy, and increase the public understanding of science.

Having skilled human resources and robust technical infrastructure, our central aim is to stimulate the circulation of knowledge produced by the Greek ecosystem, maximizing its exploitation and impact on research, society and the economy.
